Homey Pro at a Glance

Product Summary

Homey Pro

Homey Pro is the world's most advanced-yet-user-friendly smart home hub. Homey Pro unifies your smart home, and brings products from different brands and technologies together, so they can work with each other. Connect your smart home devices with Homey Pro and easily manage, control and automate them all from the Homey app.

Homey Pro works with **eight** smart home technologies: Wi-Fi, Zigbee, Z-Wave Plus, BLE, 433MHz RF, Infrared, Matter and Thread. Utilizing these technologies, Homey Pro works with 50,000+ products from over 1,000 popular brands.

The Homey App

Control, automate and monitor your entire home with the Homey app for mobile (iOS, Android), tablet (iOS, Android) and the Homey Web App – from anywhere in the world. Get beautiful controls for any device, automate everything easily with Homey Flow, and get real-time energy insights with Homey Energy – all from your phone. Homey Insights for historical data and Homey Advanced Flow are additionally available in the Homey Web App. Homey supports homescreen widgets, Apple Watch and voice assistants.

Local First

Homey Pro works locally, and processes everything on-premise. This means that Homey Flow automations continue to work, even when your internet is temporarily down, and all your smart home data is stored on Homey Pro itself. With the optional Homey Pro Ethernet Adapter, it's even independent from your Wi-Fi performance.

Homey Pro works fully without any subscriptions necessary, including access to the Homey App Store, world-wide remote access, Homey Advanced Flow and an unlimited number of connected devices and Flows. Homey Pro can be back-upped locally. Cloud backups are optionally available as well for 99 cents per month.
